Care Detail Information System Year 2000 Certification Packet

System Configuration

NSR 01-01

The Care Detail Information System (CDIS) runs exclusively in a mainframe environment. Currently, CDIS runs on an **Amdahl 5995-6650** mainframe running the **OS/390** operating system, version 1, release 2.

Data that passes the edits of the SDCS are stored in an **IDMS** database.

The CDIS is written in **ADSO**, a screen generation tool that is part of Computer Associates suite of IDMS products. The source code is stored on the mainframe in **PANVALET**, a code management system.

Users usually access the CDIS application via Gateway 2000 personal computers running 3270 terminal emulation software. Normally this is TN3270 by NetManage, Inc., using TCP/IP, running on Windows NT workstations version 4.0, Service Pack 4.

TOP SECRET is used to control access to the mainframe.

See CDIS Hardware and Software Commercial Products Matrix for version numbers and Y2K status. Also see Y2K vendor certification letters.
